2016 Industry  
Focus:  
HealthCare  
Commissioning  
Printing  
Data Centers

## Get a Service, Not Just a Box

Rx Monitoring Services, Inc. supplies you with more than just equipment; when using our tools we provide full access to invaluable services (at no extra cost) that other companies charge thousands of dollars to use: RxMS archives data and reports for future use, provides software programs for viewing data live and for report writing, and offers free web based training on how to use all of our equipment and services. Our database and archives are an important benefit for your company. For example, if a piece of equipment is 7 years old and a situation arises that the history of testing needs to be consolidated, instead of hassling to find the engineer who saved the install testing data on their laptop 7 years ago, just reference the site and we can give you a complete history in a matter of moments. Another invaluable service is our free software and training. Unlike our competitors, we give you the option of having us write your reports or you can use the free report writing software with free web based training to generate your own reports. We are constantly upgrading our software to make it easier and faster for technicians to use based on their own feedback. Check out [U-View Version 2.0](#).

### RxMS features included FREE with our service:

- Full archive of all data and reports
- Live data viewing software
- Report writing software
- Webinar training on equipment and software

### Industry Focus: HealthCare

One of the biggest preventable expense that plague the healthcare service industry is warranty and services costs. Electrical boards of these technologically advanced, high quality machines should not have to be replaced during their lifetime. Instead of continually replacing boards for tens of thousands of dollars plus the added overhead cost of those installations every time a board gets fried, take a look at the root of the problem for a tiny fraction of the cost. Bad power and grounding cause the majority of warranty and service costs. Why continue replacing boards (which really is an expensive band-aid) when you can fix the source of the problem?

### Get to know the Cx Monitor®

The Cx Monitor® is a piece of equipment that can do it all – power quality, AC/DC power, commissioning, UPS, generator, ATS/STS, & HVAC testing. The monitor gathers all of the voltage and current data required for all of those tests as well as provides a means for gathering wireless T&H or DC voltage data for over one hundred (100) locations! The Cx Monitor® is equipped to simultaneously monitor in real time, voltage on five (5) separate channels and current on five (5) separate channels.
